Usage of Table Control in ABAP

## Summary

Normally we use wizard if we are working with table control. This document helps us how to create a table control without using a wizard and how to manipulate the database based on the records in the table control. All the fields in the screen should be disabled .After clicking that 'Change' button, we should be able to insert new records and update existing records [Except primary key]. Save in the standard toolbar will be used to save the changes made. 'Delete' button should be used to delete the rows selected from the database.

A custom table zzz\_makt with the following fields is used in this program.

Fields	FieldType
ZMANDT	MANDT
ZMATNR	MATNR(Key field)
ZMAKTX	MAKTX
PICK	CHAR1

By: J.Jayanthi

# Table Control

## Procedure

Go to SE38 -> Create a program with executable type as 'Module Pool'.

ABAP: Program Attributes SAPMZTC Display

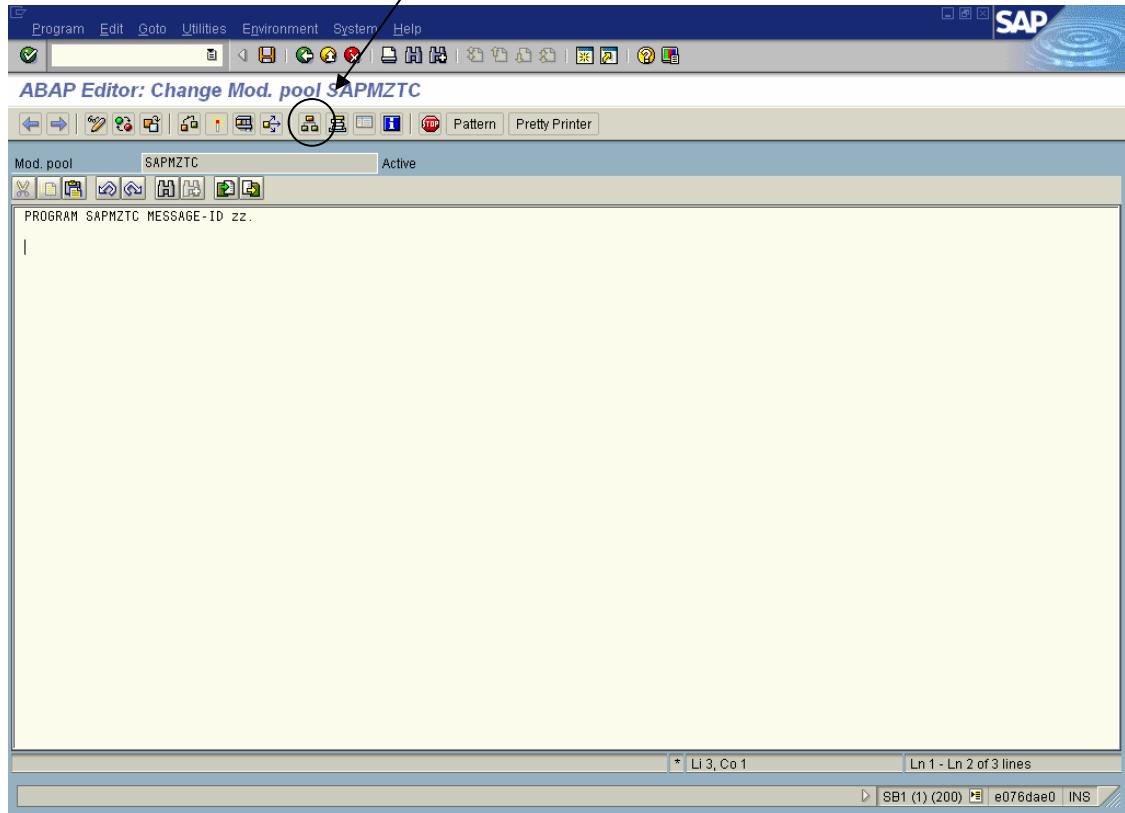

Title	Example of Table Control	
Original language	EN	English
Created	28.02.2005	HOTPX001
Last changed by	28.02.2005	HOTPX001
Status	Active	
Type	Module pool	
Status		
Application		
Authorization groups		
Development class	\$TMP	Temporary Objects (never transported!)
<input type="checkbox"/> Editor lock <input checked="" type="checkbox"/> Fixed point arithmetic		

Buttons at the bottom: checkmark, pencil, magnifying glass, double arrow, X.

## Table Control

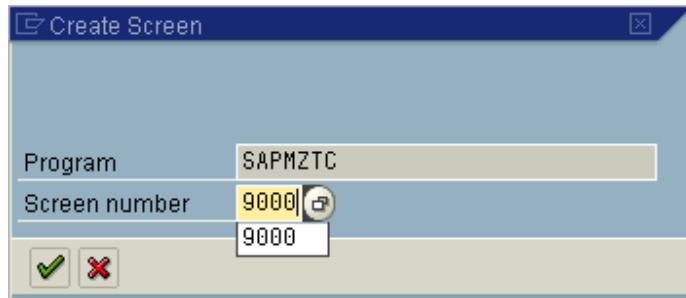

After saving this, click display object list.

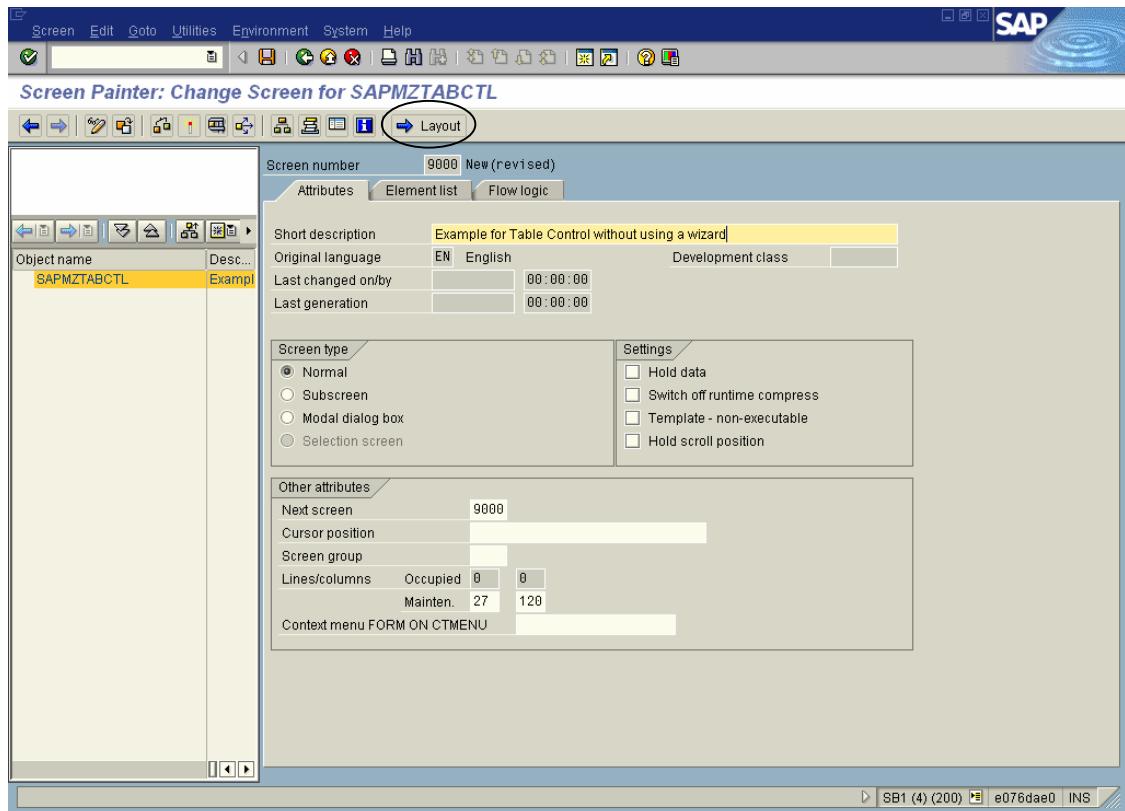

## Table Control

Right click the program name on the left side. Click Create-> Screen. Then give screen no. [as 9000].

Then fill the attributes of the screen as follows.

## Table Control

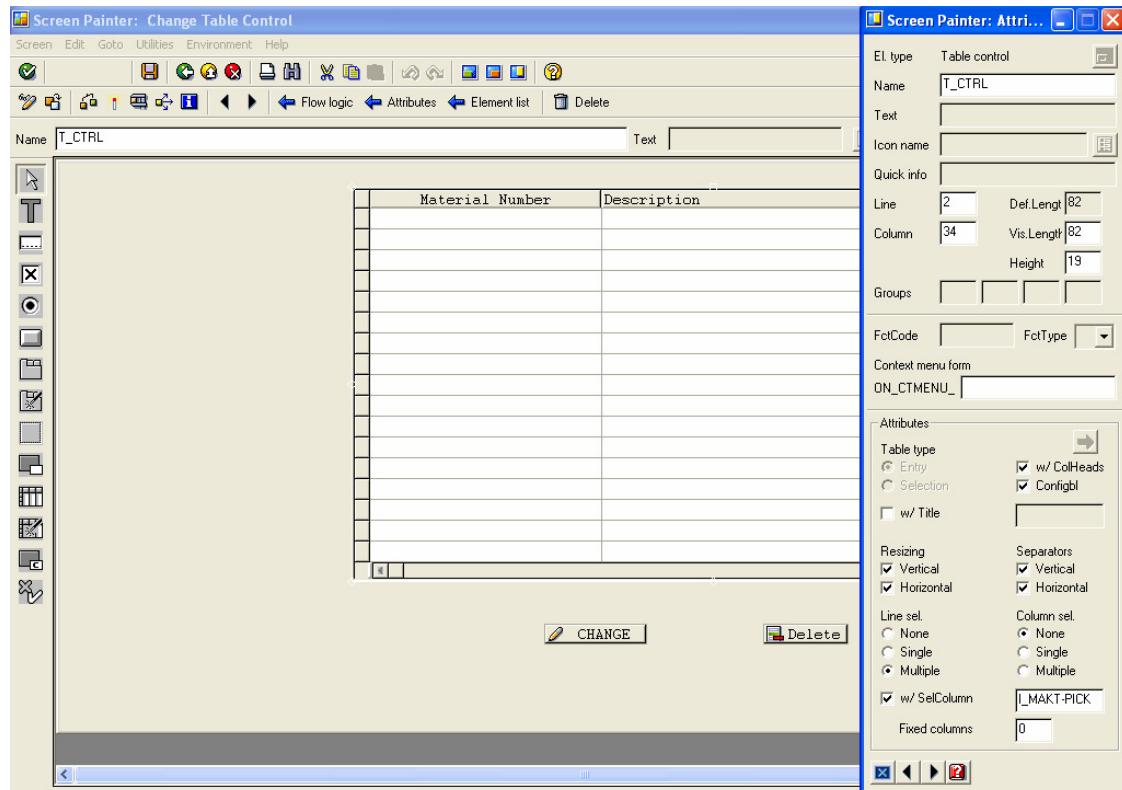

Click the layout button. Drag the table control from the controls and place it on screen.

Set the properties of table control as follows.

In the properties,

- (1) The separators checkboxes need to be checked.
- (2) The W/Selcolumn should be given a name which is having char1 in the database table so that the selection column is visible in the table control.
- (3) In order to view the horizontal scrollbar at runtime, choose the option none in Column sel.

# Table Control

Create the status by right clicking create ->GUI Status in the object display.

Similarly create title.

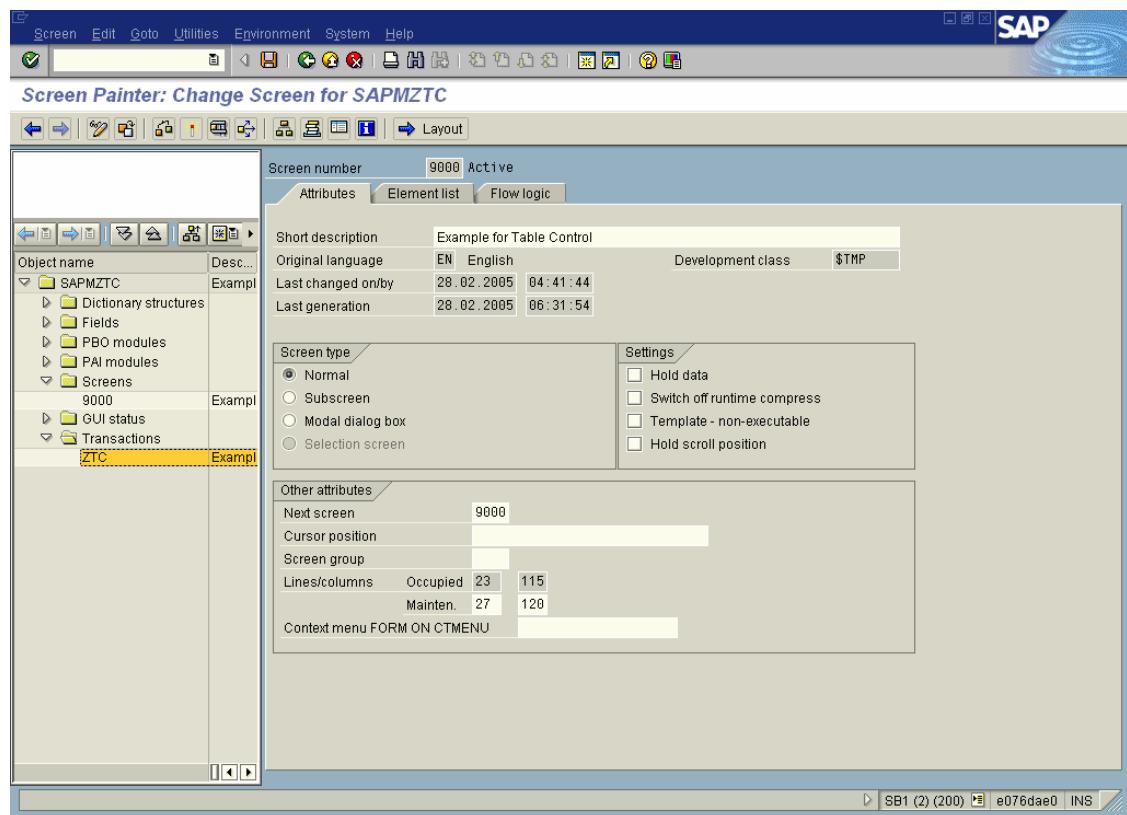

Set the SAVE , BACK, EXIT, CANCEL in standard toolbar and activate it.

# Table Control

Create a transaction by right clicking create ->Transaction in the object display. Enter required fields.

## Code

In the flow logic of the screen 9000, write the following code.

```
PROCESS BEFORE OUTPUT.

MODULE set_status.

MODULE get_t_ctrl_lines.
LOOP AT i_makt WITH CONTROL t_ctrl CURSOR t_ctrl-current_line.
* Dynamic screen modifications
  MODULE set_screen_fields.
ENDLOOP.

*
PROCESS AFTER INPUT.

LOOP AT i_makt.
  FIELD i_makt-pick MODULE check.
  FIELD i_makt-zmatnr MODULE zmatnr .
ENDLOOP.

MODULE user_command_9000.
```

In the program, write the following code.

```
PROGRAM SAPMZTC MESSAGE-ID zz.
```

```
*****
* Tables Declaration
*****
TABLES: zzz_makt.
```

## Table Control

```

## Output Screens

Enter the transaction code ZTC.

## Table Control

After that click 'Change' button. Then the non-primary key will be enabled for the existing records and we can also enter new records.

A screenshot of an SAP application window titled "Table Control". The main area contains a table with two columns: "Material Number" and "Description". The data is as follows:

Material Number	Description
100	RICE
200	PULSES
333	SOYA
400	OIL
500	SUGARCANE
600	WHEAT

The row for material number 600 is highlighted with a yellow background. At the bottom of the table, there are navigation buttons (left, right, first, last) and a toolbar with icons for "CHANGE" and "Delete". The status bar at the bottom right shows "SB1 (1) (200) e076dae0 INS".

System Help

Table Control

Material Number	Description
100	RICE
200	PULSES
333	SOYA
400	OIL
500	SUGARCANE
600	WHEAT

CHANGE Delete

SB1 (1) (200) e076dae0 INS

## Table Control

Then Click Save button in the standard toolbar. Then message saying that 'Saved Successfully' will appear in the status bar.
